Quiz Instructions

James Webb telescope

Question 1 4 pts

Which observatory contains the tomb of a person? (see slides)

Palomar observatory

Mount Wilson observatory

Lick Observatory

Keck Obervatory

Question 2 4 pts

SOFIA detects

hint: It was an airplane with a hole on the side. It is retired now

visible light

UV

X-rays

IR

Question 3 4 pts

The Keck telescopes have

(hint: slide 39)

a large lens

a large mirror

I missed the class

a segmented mirror

a small pinhole camera

Question 4 7.2 pts

Gamma rays are stopped by (see slides or lecture)

water vapor

atoms/molecules in atmosphere

solar wind

ozone layer

Question 5 4 pts

IR waves are stopped by _____ that's why the ALMA observatory (saw very early galaxies) is located in the Atacama desert (Northern Chile).

gas

ozone layer

water vapor

dust

Question 6 4 pts

Earth's atmosphere is most transparent to all wavelengths of _____ light. see slide45 or lecture

visible

x-ray

ultraviolet

both visible and ultraviolet

infrared

Question 7 4 pts

Edwin Hubble came up to the conclusion that Andromeda was a galaxy and not a nebula using which famous telescope? . See slides.

Lick Observatory

Palomar observatory

ALMA observatory

Mount Wilson

Question 8 4 pts

One telescope was to be 30 meters large in the US. The largest in the world. But the construction stopped because it was controversial. Why? (see lecture)

The land was prone to earthquakes

the land was prone to lava flow

the land had many houses built on

The land is sacred for indigeous population

Question 9 4 pts

The magellan telescope could see a dime _____ - away from a lighthouse (slide)

☐

3 AU

☐

3 yard

☐

3 miles

☐

3 feet

Question 10 4 pts

We watched a video about the James webb telescope. Far away, far away galaxies are visible only in the

hint: because of the expansion of the Universe

☐

X-rays range of spectrum

☐

UV range of spectrum

☐

optical range of spectrum

☐

IR range of spectrum

Question 11 4 pts

The size of the GMT is about

☐

10m

☐

50m

☐

5m

☐

25m

Question 12 4 pts

We watched a video about TESS. The telescope is in orbit around the Earth and sends its data to the Earth

☐

only when it gets close to the Earth

☐

constantly, every hour

☐

I missed the class

☐

TESS has left our solar system and is silenced

Question 13 15 pts

bonus point.

Hubble is a

☐

space telecope

☐

There is no telescope name after Hubble

☐

Earth bound telescope

☐

I don't need 5 points

Question 14 4 pts

What is this constellation ? (upper right)

☐

cassiopea

☐

orion

☐

Ursa major

canis major

Question 15 4 pts

The name of this asterism? (lecture)

winter pentagon

Lyra

big dipper

summer triangle

Question 16 4 pts

In the previous picture you can also see a very bright point . (lecture)

this is the Dog Sirius.

This is Procyon

This is Betelgeuse

This is Venus

Question 17 4 pts

One of the most famous xray telescope (launched in 1999). Mentioned in class and in my slides was named after:

(He discovered the mass limit of white dwarf)

☐

Einstein

☐

Webb

☐

Kepler

☐

Chandrasekhar

Question 18 4 pts

In class, I mentioned a giant 600m radio telescope built in

☐

Chile

☐

China

☐

Hawaii

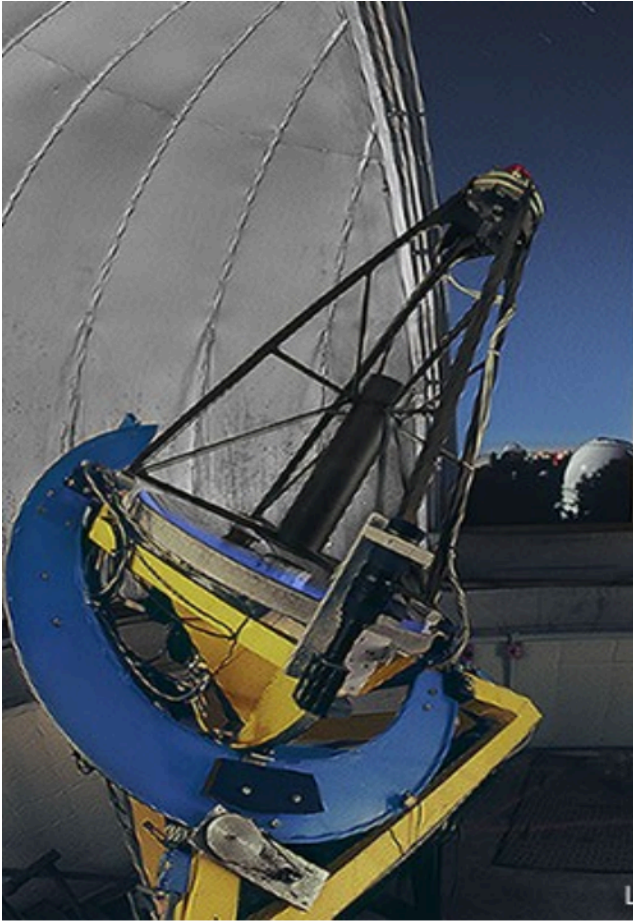

☐

Russia

Question 19 4 pts

Here is the KAIT telescope

In class, I explained that it was used to detect supernovae. and their observations contributed to the conclusion that

- ☐ the Universe is full of dark matter
- ☐ the Universe is accelerating
- ☐ the Universe is itself a giant black hole inside another Universe.
- ☐ the Universe is reversing its expansion because of gravity

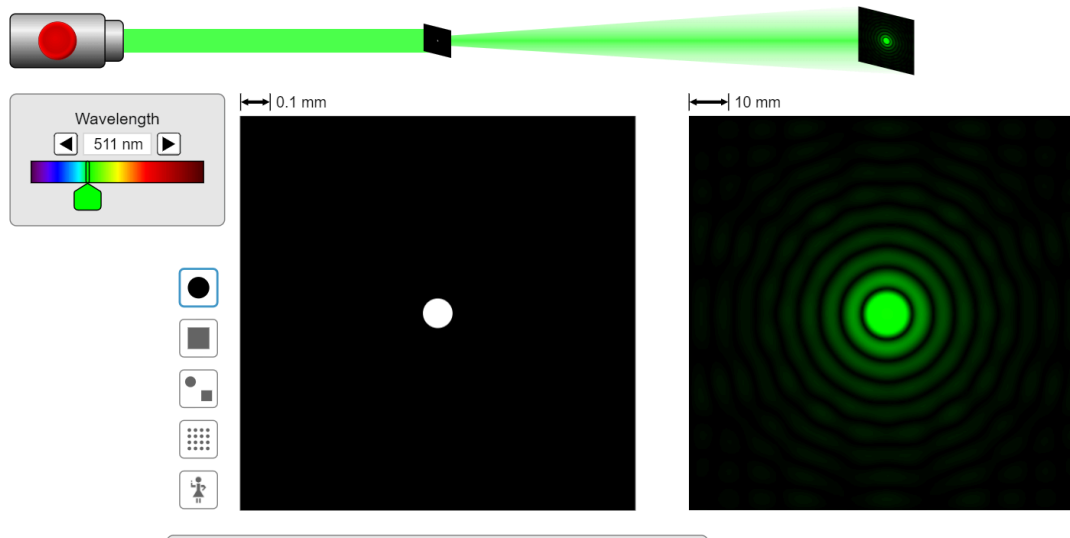

Question 20 4 pts

stars twinkle because of

- ☐ reflection
- ☐ refraction
- ☐ diffraction
- ☐ curvature of space-time

Question 21 4 pts

This picture (lecture) describes the phenomenon of

- ☐ reflection
- ☐ refraction
- ☐ absorption
- ☐ diffraction

Question 22 5 pts

We have a supermassive black hole at the center of the galaxy

- ☐ not enough information
- ☐ I space out during class
- ☐ false
- ☐ true
