Question 5 15 pts

click on lens:

https://phet.colorado.edu/sims/html/geometric-optics/latest/geometric-optics_all.html 
(https://phet.colorado.edu/sims/html/geometric-optics/latest/geometric-optics_all.html)

The image that you get with such a lens is (compared to the object= pencil)

upright

upside down

depend on the object.

rotated by 90

Question 6 15 pts

click on mirror:

https://phet.colorado.edu/sims/html/geometric-optics/latest/geometric-optics_all.html 
(https://phet.colorado.edu/sims/html/geometric-optics/latest/geometric-optics_all.html)

the image is

rotated by 90

It depends on the object

upright

upside down

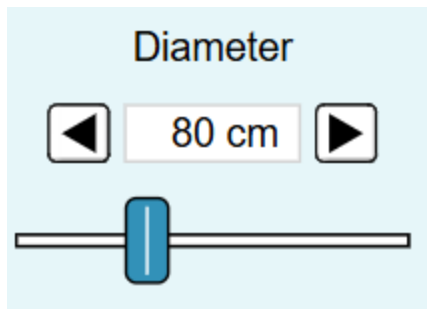

Question 7 15 pts

click on lens

https://phet.colorado.edu/sims/html/geometric-optics/latest/geometric-optics_all.html 
(https://phet.colorado.edu/sims/html/geometric-optics/latest/geometric-optics_all.html)

change the diameter of the lens using - play with it. small to big to small.

As the size is smaller:

the image gets dimmer

nothing happens

the image gets smaller

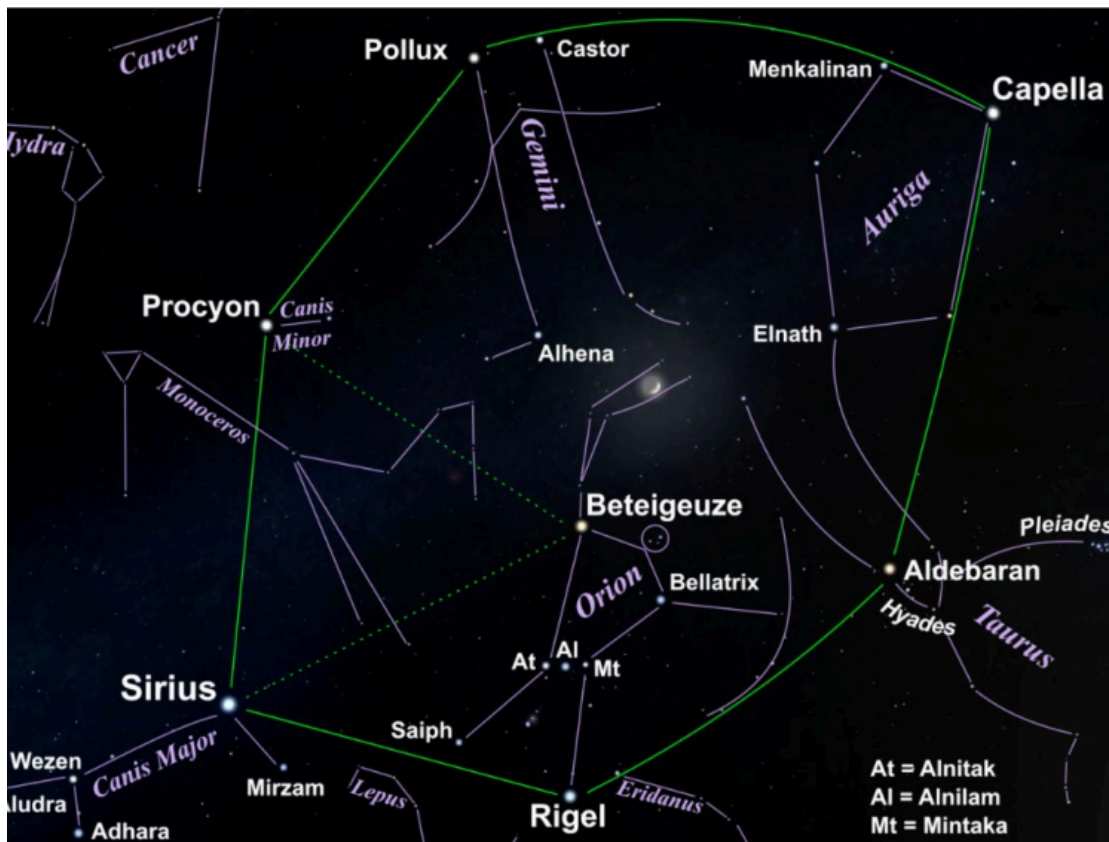

the image flips.

Question 8 10 pts

This

is the winter hexagone

is the spring polygone

is the summer hexagone

is the fall pentagone

Question 9 15 pts

I showed this picture in class:

In photography/astronomy this is called

chromatic aberration

rainbow syndrome

colorful aberration

spherical aberration
