Quiz Instructions

For some questions. Use slides

Question 1 12.5 pts

The event horizon was able to take a picture of a black hole in M87 in 2017. For the first time.
go here:

<https://www.haystack.mit.edu/astronomy/astronomy-projects/event-horizon-telescope> 
(<https://www.haystack.mit.edu/astronomy/astronomy-projects/event-horizon-telescope>)

the black hole has a mass of about

5 billion times the mass of the Sun

☐

6.5 billion times the mass of the Sun

☐

4 trillion times the mass of the Sun

☐

3 million times the mass of the Sun

Question 2 12.5 pts

Use the same website. The telescope also took a picture of our own black hole. Called:

☐

Super Massive A+

☐

Orion AAA

☐

Sagittarius A*

☐

Andromeda A++

Question 3 12.5 pts

Keep reading. The telescope is actually an array of dishes. One of those dishes is located in

☐

Chile

☐

Italy

☐

Argentina

☐

Russia

Question 4 12.5 pts

go to :

<https://www.sciencealert.com/strange-flashes-could-be-signs-of-closest-object-seen-near-a-black-hole>  [_ \(https://www.sciencealert.com/strange-flashes-could-be-signs-of-closest-object-seen-near-a-black-hole\)](https://www.sciencealert.com/strange-flashes-could-be-signs-of-closest-object-seen-near-a-black-hole)

There is a supermassive black hole in the galaxy 1ES 1927+654 275 million light-years from the Milky Way.

The behavior of this black hole was strange as it was pulsating "x-rays". brightening at time. scientists think this is because its devouring a

☐

a whole solar system

☐

another black hole

☐

white dwarf

☐

neutron star

Question 5 12.5 pts

In the structure Lanakia. there is a point (center of mass) that attract all the clusters of galaxies that belong to Lanakia. Pulling them. IT is called the

☐

great dark matter

☐

big bautiful seductor

☐

large monster

☐

great attractor

Question 6 12.5 pts

We see M31 (andromeda galaxy) as it

☐

was 3 trillion years ago

☐

was 13.7 billion years ago

☐

was 2.5 million years ago

☐

is now

Question 7 12.5 pts

The closest star to our Sun is a constellation that represents a mythological character from Greek mythology. those creatures

note : they were portrayed as wild and unrestrained. An exception was Chiron. Hercules mentor. It was placed in the sky by Zeus because Hercules killed him by accident.

were half human and half horse

were half dog half human

deers

were rabbits

Question 8 12.5 pts

This is in Buenos Aires

This is in Paris

This is in Moscow

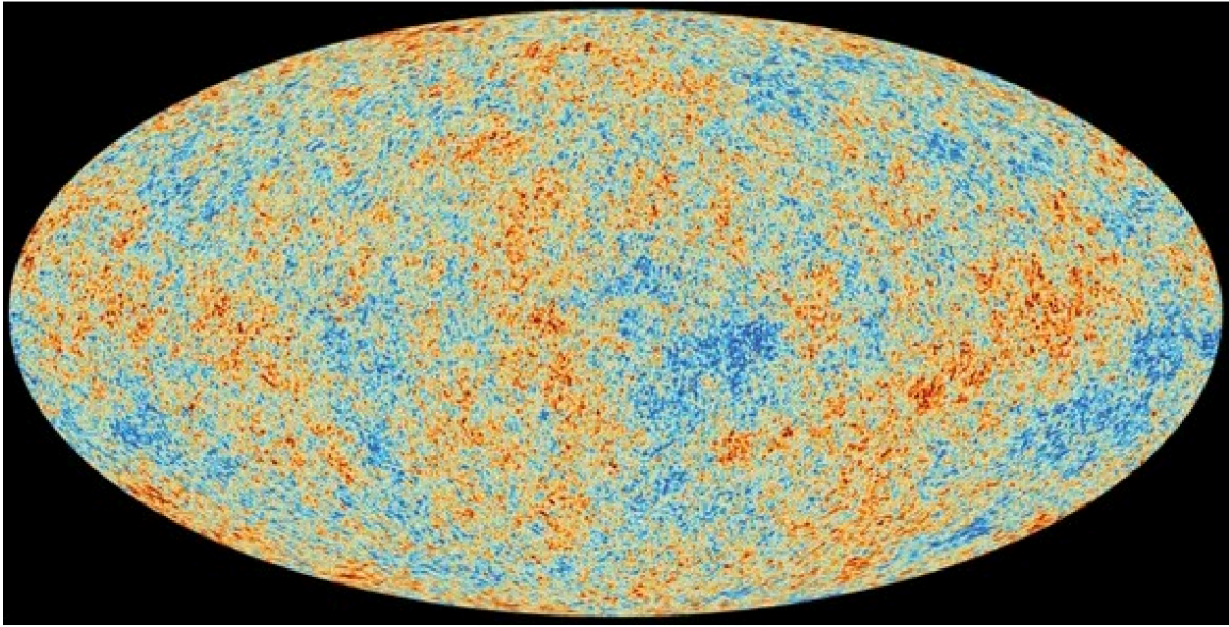

This is in Venice

Question 9 5 pts

bonus

This is

proxima centauri

the baby universe.

the future universe

the great attractor
