Quiz Instructions

Question 1 15 pts

Which of those objects are "failed stars"

☐

white dwarfs

☐

red dwarfs

☐

brown dwarfs

☐

yellow dwarfs

Question 2 15 pts

A brown dwarf will not collapse (gravitational pull) because

☐

of electron degeneracy pressure

☐

of radiation pressure

☐

hot gas pressure

☐

of composition. too hard to be squeezed/

Question 3 15 pts

When the Sun fuses hydrogen, helium is (when the Sun is on the main sequence)

☐

dumped into the core

☐

expelled as a planetary nebula

☐

burped ou as a supernova

☐

helium does not build up. it being recycled

Question 4 15 pts

When the Sun will run out of hydrogen,

☐

it will leave the main sequence and will shrink to a red dwarf

☐

it will leave the main sequence and become a white dwarf immediately

☐

it will stay on the main sequence and start burning helium

☐

it will leave the main sequence and becomes first a red giant

Question 5 15 pts

as seen in class. Most of stars are

☐

blue stars

☐

brown dwarfs

☐

red dwarfs

☐

yellow stars

Question 6 15 pts

hint: see my slides about the Sun

In the last stage. The Sun will get ... in its core

☐

helium

☐

iron

☐

carbon, oxygen

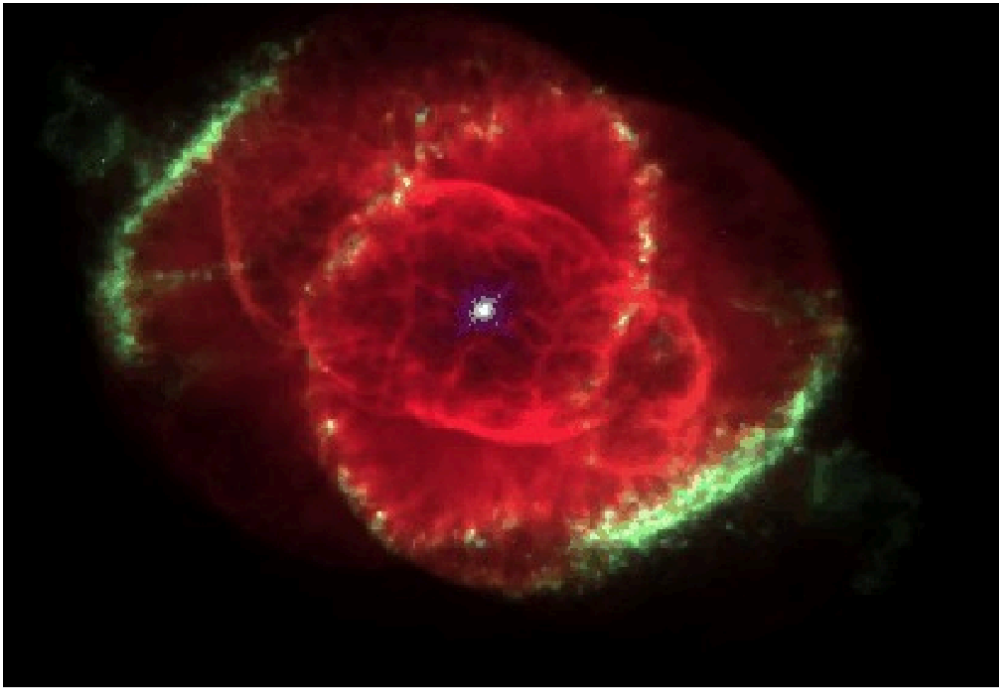

☐

magnesium

Question 7 15 pts

This is a planetary nebula. At the center, you can see a
(the remnant)

☐

brown dwarf

☐

black hole

☐

white dwarf

☐

neutron star
