Quiz Instructions

Question 1 20 pts

When a white dwarf is in binary system with a red giant. A transfer of material can happen between the red giant and the white dwarf. The white dwarf can ends as a supernova type IA if

☐

the mass of the white dwarf gets larger than 1.4 the mass of the Sun

☐

if the white dwarf stars to spin really fast

☐

if the red giant blows in a planetary nebula

☐

if the mass of the white dwarf gets larger than 10 times the mass of the sun

Question 2 20 pts

A massive star (larger than 10 times of the mss of the Sun) can fuse elements (increasing atomic numbers) up to which element?

☐

iron

☐

magnesium

☐

carbon

☐

oxygen

Question 3 20 pts

A massive star will explode as

☐

supernova type II

☐

supernova type IA

☐

planetary nebula

dwarf nova

Question 4 20 pts

The remnant left behind after a massive star exploded could be a

neutron star

brown dwarf

white dwarf

yellow dwarf

Question 5 20 pts

Check my slides. A red dwarf

will dim away as a white dwarf

will burp out its outmost layer as planetary nebula

will explode as a supernova

will turns to a neutron star
